# FLEXBOX

## THE CONTAINER

The parent element for your items. Use any CSS selector you feel appropriate

```
.fx_container {  
    display: flex;  
}
```

**Main axis:** This is the primary axis along which flex items are distributed. This will change depending upon the value of flex-direction.

**Main-start and Main-end:** Flex items are placed within a container beginning at main-start and resting at main-end.

**Main-size:** A flex item's width or height is the main size. This depends upon which is the main direction. The main size property will either be 'width' or 'height'.

**Cross axis:** This is the axis that is perpendicular to the main axis. The direction depends on the main axis direction.

**Cross-start and Cross-end:** Items are placed beginning at the cross-start side of the flex container and move towards the cross-end side.

**Cross-size:** The width or height of a flex item, which again depends on the main direction. This property will be either 'width' or 'height'.

# THE 2 AXES

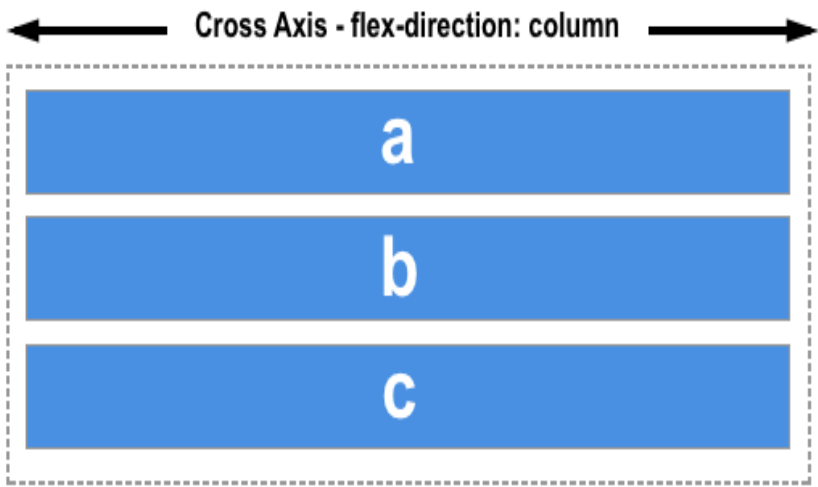

# FLEX-DIRECTION

- Values:
- row
  - row-reverse
  - column
  - column-reverse

FLEX-DIRECTION: ROW

# THE CROSS AXIS

Perpendicular to the main axis

If your main axis is column or column-reverse  
**then the cross axis runs along the rows.**

If your (main axis) is set to row or row-reverse  
**the cross axis runs down the columns.**

# FLEX-DIRECTION: COLUMN

column

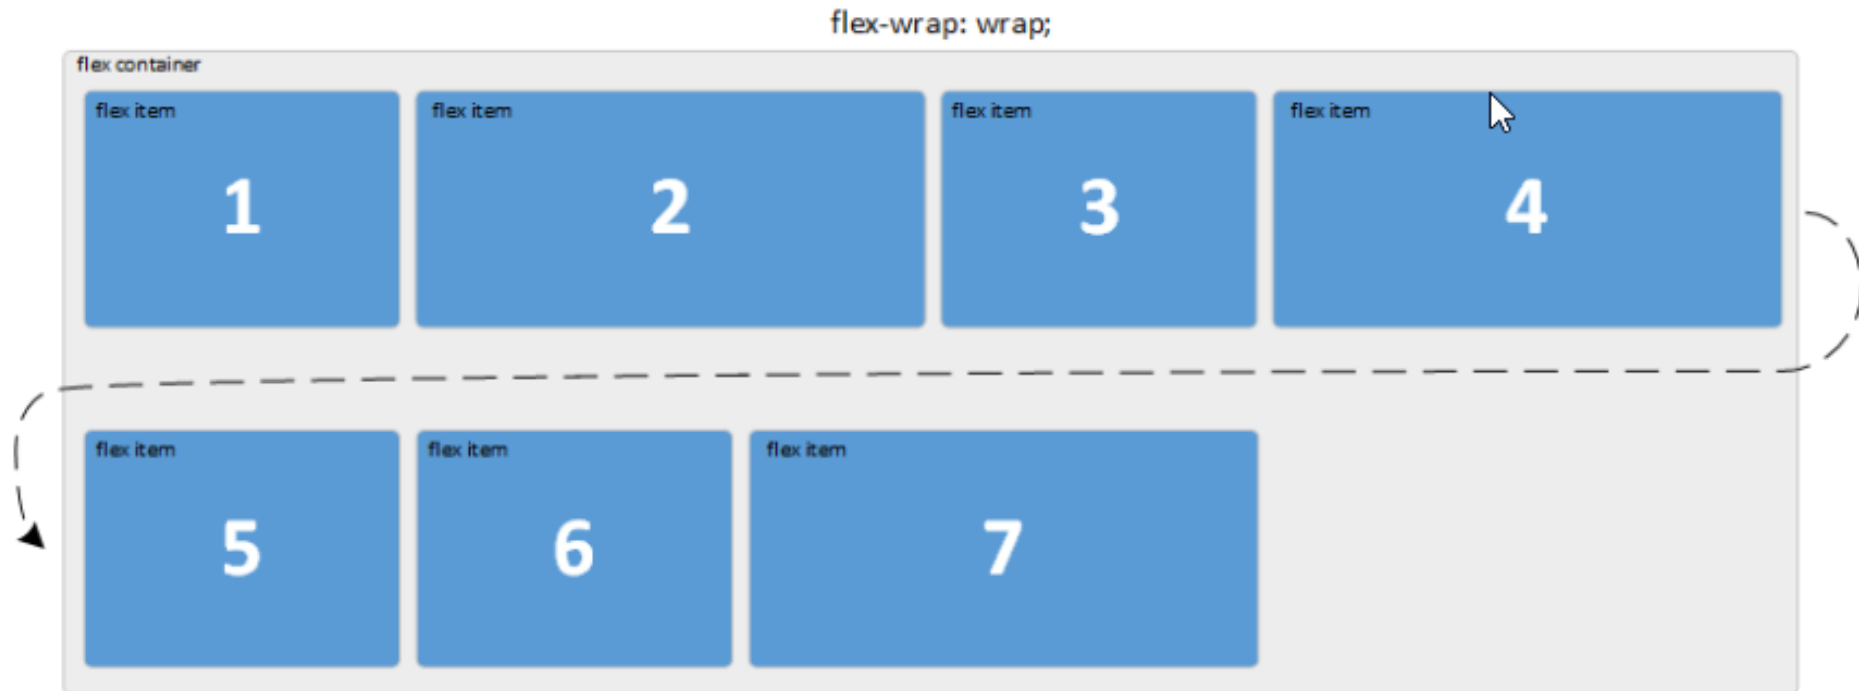

column-reverse

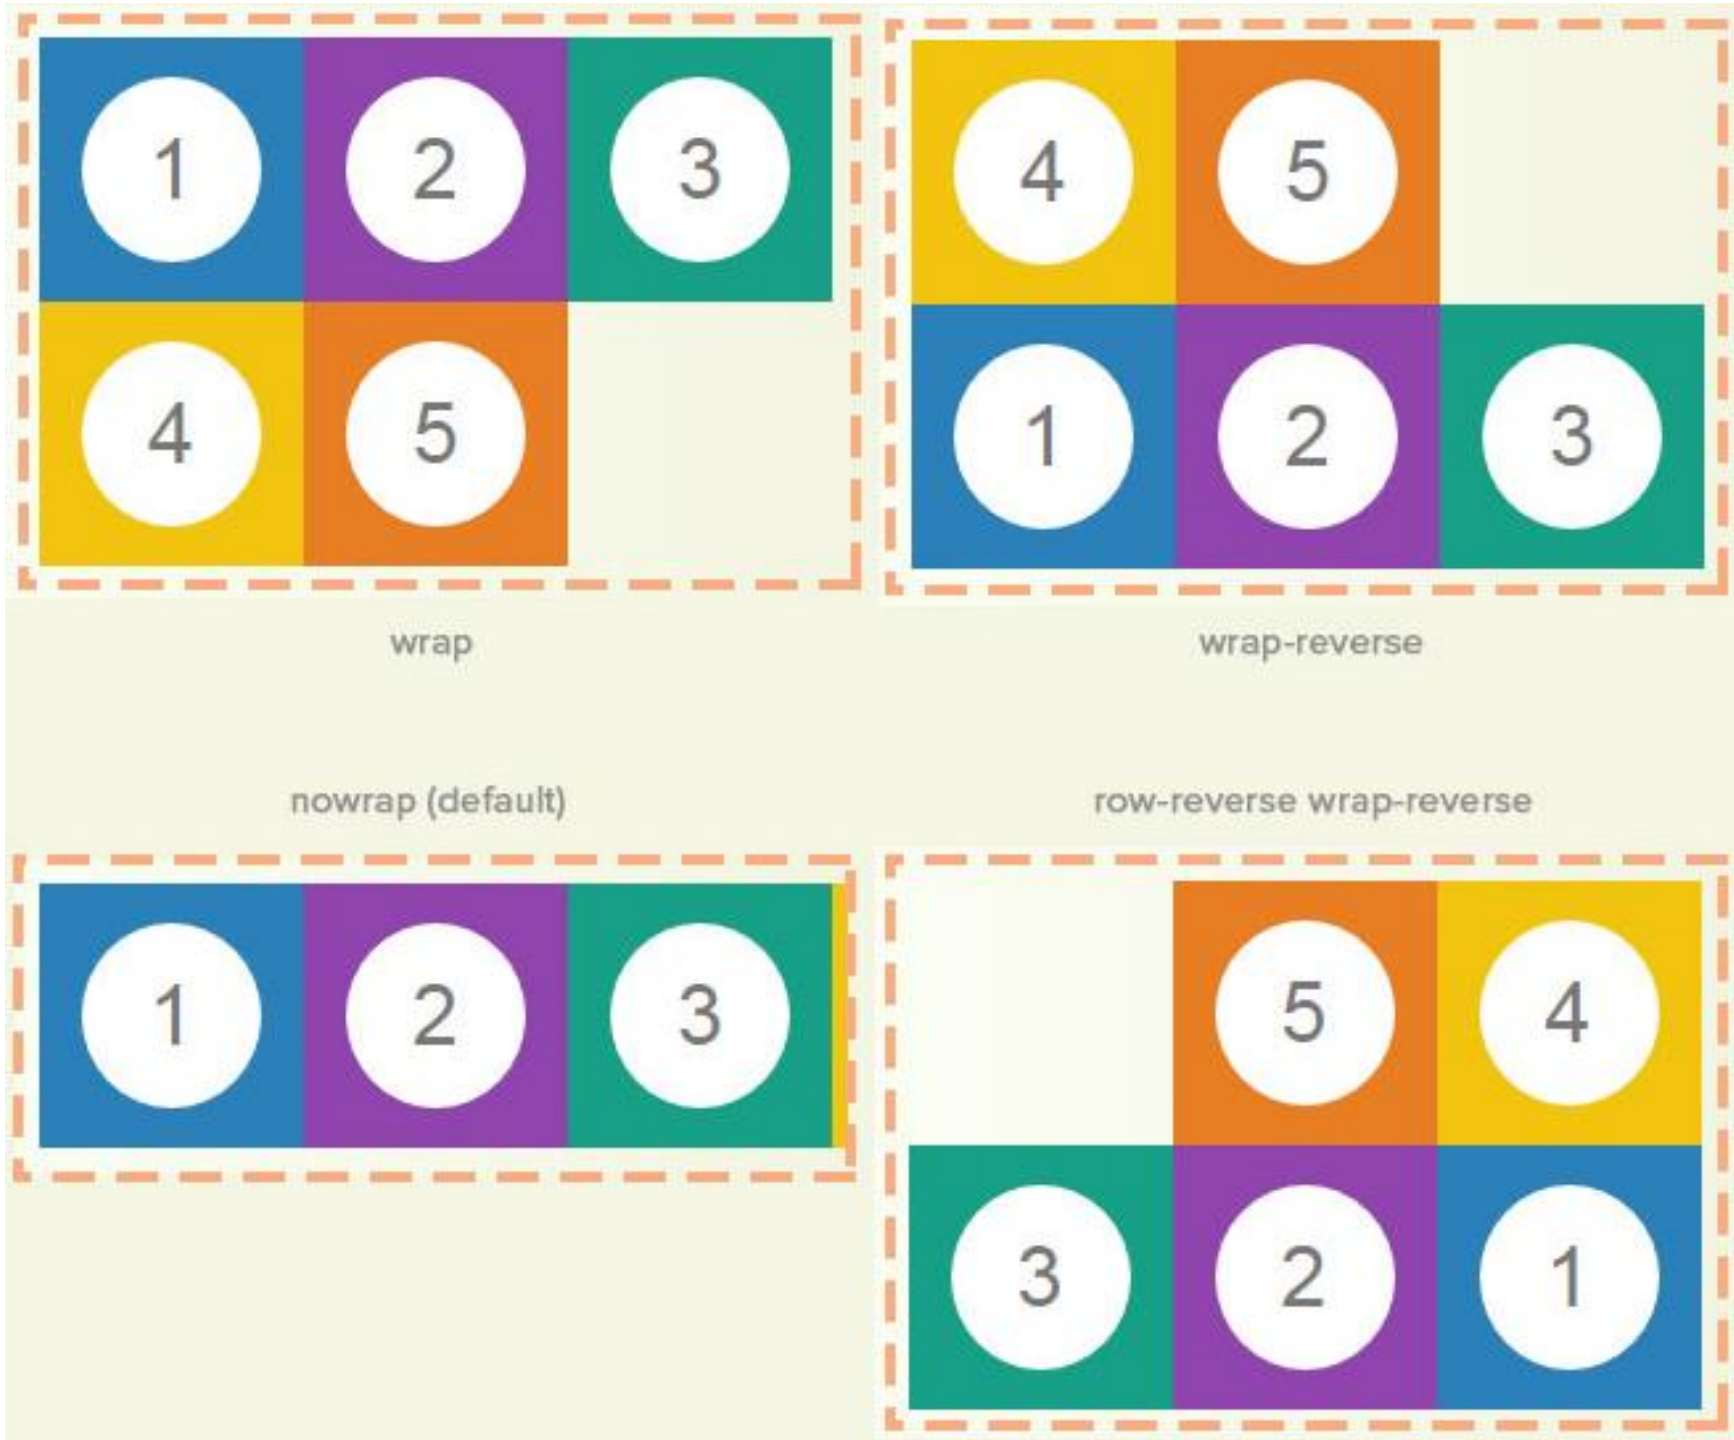

# WRAPPING ITEMS

Default behavior **is not to wrap your items.** (`: nowrap`)

`flex-wrap: wrap`

# WRAP

# SHORT-HAND NOTATION

Short-hand for the flex-direction & flex-wrap

**flex-flow:** <flex-direction> <flex-wrap>

*flex-direction*

Possible values:

row  
row-reverse  
column  
column-reverse  
initial  
inherit

Default value is "row".

Specifying the direction of the flexible items

*flex-wrap*

Possible values:

nowrap  
wrap  
wrap-reverse  
initial  
inherit

Default value is "nowrap".

Specifying whether the flexible items should wrap or not

# JUSTIFY-CONTENT

flex-start

flex-end

center

space-between

space-around

space-evenly

# EXAMPLE : JUSTIFY-CONTENT

justify-content: **space-between**

justify-content: **space-around**

# JUSTIFY- CONTENT

justify-content: **space-between**  
align-items: **center**

# JUSTIFY-CONTENT

A column with

justify-content: **space-between**  
align-items: **center**

# JUSTIFY-CONTENT

**justify-content: flex-start;**

**justify-content: center;**

**justify-content: flex-end;**

# ALIGN-ITEMS

**FLEX CONTAINER**  
display: flex  
align-items: stretch (DEFAULT)

**FLEX CONTAINER**  
display: flex  
align-items: flex-start

**FLEX CONTAINER**  
display: flex  
align-items: flex-end

**FLEX CONTAINER**  
display: flex  
align-items: center

# FLEX GROW: [NUMBER]

## FLEX V. INLINE-FLEX

**display: flex** causes an element to behave like a block-level flex container box.

**display: inline-flex** causes an element to behave like an inline-level flex container box
